

Cardiovascular Imaging and Information Solution

Connected cardiovascular care

Rising cost pressure, staff shortages, increasing amount of complex data, and decentralized work environments: strong trends are forcing transformation in the healthcare sector – and your IT platforms must keep up. Siemens' Cardiovascular Imaging and Information Solution offers enterprise-wide reading and smart structured reporting through a single system, driving your outcomes. It helps enable efficient clinical workflows and increased performance, therefore, improving operational efficiency.

Insufficient quality data

Imaging and other diagnostic data are the basis for sound decision making in cardiovascular care. Insufficient data can lead to uncertain decisions – which might lower performance or quality of care. Your Cardiovascular Imaging and Information Solution should provide comprehensive data throughout the entire clinical path.

Workflow scattered across multiple workstations

Is your expert staff wasting time walking from one workplace to another during the same workflow, because not all data are available everywhere? This is not only an efficiency issue. It also makes it difficult to get a comprehensive view of all information related to one case.

Large and complex interfacing environment

Are you operating several systems and interfaces to run your cardiovascular imaging workflow? Typically, your effort for managing those disparate systems is higher than would be necessary. A centralized, unified solution can help here.

SIEMENS
Healthineers

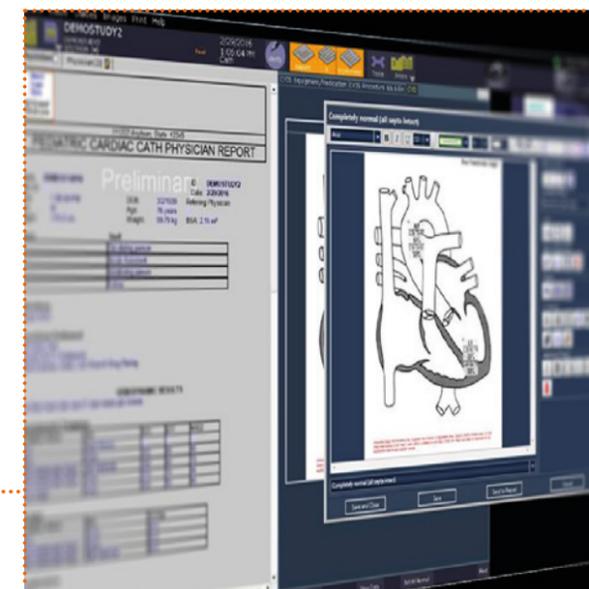

High quality data to improve outcomes and enable value-based care

Make use of consistent data and structured reporting to improve your communication and coordination in cardiovascular care. Experience customizable report templates that easily adapt to the way you work. While an integrated decision support functionality supports you for complete and consistent procedure reporting.

Increase performance through single point, enterprise-wide access to data and images

Siemens' Cardiovascular Imaging and Information Solution is your single point of access to data and images, across your enterprise. It allows a bi-directional data flow with your Electronic Health Record, enabling relevant information to be available when and where it is needed. While advanced features such as graphical diagrams streamline communication with referrers and patients.

Operational efficiency through advanced IT capabilities

With your unified cardiovascular solution, you can manage all your users across the enterprise, in a centralized way. This lowers cost, as you are capitalizing on fewer systems and interfaces. Virtualize your images and data to reduce your total cost of ownership.
