

Patient Consent (PC)

Data security is an essential and sensitive topic in healthcare IT. The registration and retrieval of medical documents call for a patient's declaration of consent.

Patient Consent allows paperless documentation of a patient's consent. Through declaration of consent, all healthcare professionals involved in the treatment process are enabled to directly exchange medical data.

Everything at a glance:

- Software for mobile devices for healthcare professionals
- Clear identification by name, gender, birthdate, and patient ID
- Consent is automatically saved for documentation
- Immediate access possible
- Accelerated consent process without media breaks
- Situative opt-outs possible
- Compliant with security standards, national/international data security policies
- Based on interoperability standards

Four easy steps to document a patient's consent:

1. Search for the patient (e.g. name or the bar code)
2. View contact data and existing consents
3. Document a new declaration of consent
4. Let the patient sign the declaration
