Progress that is Impressive – Ecological Advantages of SOMATOM Definition Flash

- Dose reduction to less than 1 mSv for cardiac examinations
- Average energy savings of 45% during standard thorax examinations*
- Average energy savings of 85% during cardiac examinations*
- No more lead used for counterweights
- All substances contained in the product and its packaging are documented
- Plastic parts are labeled for recycling
- Disassembly instructions for high-quality recycling are available
- Complete CT systems and their components are taken back and are refurbished
- Product take-back according to strict EU directives
- More than 97% of the materials used can be returned to the flow of recyclable materials
- Environmental product declaration is available for download via internet

*Compared to SOMATOM Definition

SOMATOM Definition Flash

Reduction of Lead
The use of lead for balancing weight has been completely eliminated. Lead is now used only when necessary to protect patients from unnecessary radiation. And the amount of lead required in the radiation shield for this purpose has been reduced by 70% (from 5.26 to 1.45 kilograms) compared to the previous SOMATOM Definition.

Progress that is impressive
Compared to the previous SOMATOM Definition model, the SOMATOM Definition Flash uses (depending on the type of examination required) 45%* to 85%** less energy during scanning.

An additional success is the significant reduction of radiation dose in heart examinations by about 70% (< 1 mSv at 100 kV and <1.5 mSv at 120 kV) compared to the previous SOMATOM Definition. Competitive systems generally utilize from 9 to 30 mSv for equivalent examinations.***

* Standard thorax examinations
** Heart examinations

Validated information according to EMAS is marked by a gray background and the statement “EMAS: validated information.”
With the introduction of the SOMATOM Definition Flash, we took on CT’s most pressing challenge and made dose reduction the centerpiece of our research. Its core innovation – the revolutionary Flash Spiral – can be summarized in four words: Flash speed. Lowest dose.

The SOMATOM Definition Flash opens a door to new levels of patient friendliness with the speed to cover the entire thorax in less than a second – if necessary even without a breath hold. Now, even demanding patients, i.e. obese and trauma patients, restless children, etc. will hardly cause a ripple in your daily routine. All can be scanned quickly and efficiently.

Maybe even more important – and impressive – is the incredible reduction in dose for all scans, resulting, e.g. in dose down to sub-mSv for cardiac imaging. In its second generation, Dual Energy automatically provides a second contrast for the best possible diagnosis without extra dose. At the same time, X-CARE allows protecting individual organs and the most radiation-sensitive body regions – for example, female breasts – by accurately and efficiently minimizing exposure. After IRIS (Image Reconstruction in Image Space) Siemens now introduces with SAFIRE* the first available raw-data-based iterative reconstruction that is a unique approach allowing for up to 60% dose savings in a wide range of daily clinical applications. Each of the multiple iteration steps further eliminates image noise and artifacts.

* The information about this product is being provided for planning purposes. The product is pending 510(k) review, and is not yet commercially available in the U.S.

Organ-sensitive dose protection

X-CARE
Previous attempts at dose reduction were very successful but did not specifically take into consideration highly dose sensitive areas such as women’s breasts. Now, the SOMATOM Definition Flash can selectively reduce sensitive-area exposure up to 40% without loss of image quality. This is accomplished by turning down the X-ray tube during those parts of the rotation that would result in the most direct exposure for these areas.

Adaptive Dose Shield
The SOMATOM Definition Flash eliminates pre- and post-spiral over-radiation (marked in red). The Adaptive Dose Shield, which is unique in the CT industry, is part of the innovative STRATON® X-ray tube design. It automatically moves shields into place to block unnecessary dose. The Adaptive Dose Shield dynamically opens at the beginning of a spiral range and then dynamically closes at the end. Now all clinically irrelevant dose is eliminated, not only for dedicated applications, but for all standard spiral acquisitions. Giving you the ability to save up to an additional 25% of dose in routine exams.

EMAS: validated information – Updated environmental statement 2009
Environmental Product Design

Material supply:
From natural resources to delivery of semi-finished products

Production/delivery:
From production of components to operation startup by the customer

Use/maintenance:
Includes daily use by our customers as well as maintenance

End of life:
From disassembly at the customer through material and energy recycling

Siemens Healthcare considers environmental aspects in all phases of the product life cycle, including material supply, production/delivery, use/maintenance and end of life.

Our product design procedure fulfills the requirements of IEC60601-1-9:2007 “Environmental product design for medical electrical equipment”.

This standard supports the effort to improve the environmental performance of our products.

Identification of Product Materials

SOMATOM Definition Flash is mainly built out of metals. This ensures a high degree of recyclability.

Total weight: approx. 4,400 kg

EMAS: validated information – Updated environmental statement 2010
The high-performance X-ray tube assemblies are designed the way that as much parts as possible may be reused. At the end of life the tube assemblies are taken back and are refurbished. Quality is guaranteed by compliance to standard IEC 62309. Under optimal conditions up to 40% of a tube assembly may consist of reused parts.

Our product take back program ensures that we address the environmental aspects of our products – even at the end of life. As part of this program, we refurbish systems and reuse components and replacement parts whenever possible through our Refurbished Systems business. We reuse components and subsystems for non-medical products. We also recycle for material or energy value. Disassembly instructions for disposal and recycling are available for our products.
### Operating Data

**Heat emissions of the device**
- Basic load: $< 4.5$ kW
- Scanning: $< 20$ kW

**Allowed ambient temperature**
- 18°C–28°C

**Allowed relative humidity**
- 20–75%

**Noise level**
- $\leq 70$ dB(A)

**Energy consumption:**
- Basic load: $< 4.5$ kW
- Full load: $\sim 20$ kW
- Maximum load: 250 kW

**Power-on time**
- $< 5$ min

**Power-off time**
- $< 5$ min
