ACUSON Freestyle ultrasound system

Environmental Product Declaration

siemens-healthineers.com/ultrasound
Progress that is impressive

The ACUSON Freestyle ultrasound system sets the pace for modern healthcare. Its advanced technologies, including the industry’s first cable-free ultrasound transducer, is designed to streamline operational and sterile field management. Value-based innovations for improving visualization and cable-free scanning are built to deliver new levels of ease and efficiency at your point of care. From anesthesiology to interventional radiology to musculoskeletal ultrasound, the ACUSON Freestyle system is engineered with the user in mind.

Ecological advantages of the ACUSON Freestyle ultrasound system

- Portable, light weight ultrasound system means a smaller environmental footprint
- Managed Node Package upgrade allows software updates to be delivered remotely, reducing customer service visit travel
- Automatic energy saving modes conserve electricity
- Rapid power-up and power-down time conserves energy
- All substances contained in the product and its packaging are documented
- Disassembly instructions for high-quality recycling are available
Light weight reduces environmental footprint

Low mass and reduced shipping weight means lower fossil fuel consumption and greenhouse gas emissions during shipping (for production and to customers) and less natural resources consumed in manufacturing. With this and the reduced need for service visit travel, the ACUSON Freestyle system proves it is possible to have powerful performance without a large environmental impact.

Two modes reduce energy consumption

The ACUSON Freestyle system is equipped with two modes that reduce energy consumption.

• “Auto-freeze” puts the system in freeze mode by halting parts of the imaging subsystem when no changes to the image are detected. This reduces power consumption by ~10% compared to live imaging for the system. It also saves battery life in the probe, which reduces the power consumed to recharge probe batteries.

• “Sleep” mode is similar to a screen saver. It dims the screen after a user-configurable time period after the system enters Auto-freeze. It further reduces power consumption by ~10% over Auto-freeze.
Environmental management system

Siemens Healthineers gives high priority to achieving excellence in Environmental Protection, Health Management and Safety (EHS).

Across the globe, Siemens Healthineers has implemented a consistent EHS management system. It lays the foundation for the continuous improvement of our performance in these areas, and regular auditing assures our conformance.

Healthineers is certified in accordance with ISO 14001 and OHSAS 18001.

Environmental product design

Material supply:
From natural resources to delivery of semi-finished products

Production/delivery:
From production of components to operation startup by the customer

Use/maintenance:
Includes daily use by our customers as well as maintenance

End of life:
From disassembly at the customer through material and energy recycling

Siemens Healthineers considers environmental aspects in all phases of the product life cycle, including material supply, production/delivery, use/maintenance and end of life.

Our product design procedure fulfills the requirements of IEC60601-1-9:2007 “Environmental product design for medical electrical equipment”.

This standard supports the effort to improve the environmental performance of our products.
Energy Analysis

Energy consumption is an important environmental aspect of medical devices. The intelligent ACUSON Freestyle system automatically detects when the system is no longer scanning and automatically switches the system from Scan to Auto-freeze mode, reducing electricity consumption approximately 2% from 0.230 kW to 0.225 kW. The system can be put into Sleep mode to reduce electricity consumption to approximately 0.207 kW, almost another 8% less.

Packaging

The ACUSON Freestyle system packing materials consist entirely of paper, cardboard and plastic, nearly all of which can be recycled.

The total weight of the packaging below is for a standard ACUSON Freestyle system with two probes and four batteries.

Total weight:
closed packaging approx. 5.20 kg
### Operating data

ACUSON and Freestyle are trademarks of Siemens Medical Solutions USA, Inc.

At Siemens Healthineers, our purpose is to enable healthcare providers to increase value by empowering them on their journey towards expanding precision medicine, transforming care delivery, and improving patient experience, all enabled by digitalizing healthcare.

An estimated 5 million patients globally everyday benefit from our innovative technologies and services in the areas of diagnostic and therapeutic imaging, laboratory diagnostics and molecular medicine, as well as digital health and enterprise services.

We are a leading medical technology company with over 170 years of experience and 18,000 patents globally. With more than 48,000 dedicated colleagues in 75 countries, we will continue to innovate and shape the future of healthcare.
