

Radiology Information System

Interlinked information, at every step.

Tools and utilities for higher efficiency

Create time-saving interactive documents (IDOCs) yourself. Easy IDOC tools enable administrative users to create and manage the documents and alerts they need, fast. Guided implementation tools reduce implementation effort and offer more control.

Access relevant data, enterprise-wide

Personalized user modules can provide appropriate information to the right user, at the right time. The team no longer needs to search for patient information because they have standardized, enterprise wide access to data. Enhanced serviceability through active server monitoring which actively detect and correct system issues and minimize downtime.

Increase efficiency through paperless, mobile workflows

Forget paper – go mobile. Full application and interactive documents are available on mobile devices. You can even create an IDOC for patient consent and have your patient sign forms on your tablet. This lets you focus more time on the patient, and less on technology interruptions. Plus: Modules like the Screening Workflow Navigator²⁾ are also available on a tablet, and this module enables proper reimbursement for your screening programs.

Disparate IT systems

Are your imaging workflows scattered across disparate workplaces and worklists? If so, standardizing high-quality care and working efficiently can be difficult. Establishing a seamless exchange of imaging information across the entire enterprise can help increase productivity and outcomes.

Limited human and financial resources

In times of staff and budget shortages it is challenging to maintain the safety and quality of your imaging workflow. Is there a way to relieve the IT administrator from implementation effort?

Non-secure, inefficient paper movement

Is your expert staff wasting time filling in paper forms, trying to manage the paper shuffle? A paperless workflow including mobile devices will allow your care team to focus more time on the patient, and less time on technology interruptions.

1) syngo Workflow SLR is available in USA, Australia, New Zealand and Canada.
2) Screening Workflow Navigator is available in the USA only.
