iPilot Dynamic
Displays Overlay on XWP/MMWP Monitor
Please refer to manual for complete system capability

1. Load or acquire 3D dataset.
2. Rotate volume to desired working position.
3. Select “C-arm to Match 3D” icon and deflect joystick to move to position.

4. Adjust Table/Zoom/SID etc. to center ROI.
5. Select iPilot Dynamic icon.

6. Fluoro. Adjust overlay percentage using joystick or Touch Screen. Any geometric changes are compensated for automatically. Additional options can be performed from the iPilot Dynamic gray box. Translucent preset can be selected from here.
