Dimension Vista® 500
Intelligent Lab System
Instrument Specification

Effective October 2015

Instrument Weight and Dimensions

Weight
841.41 kg (1,855 lbs.)

Dimensions
- 215.3 cm (84 ¾") wide x 141.2 cm (55 ⅞") high (without monitor) x 131.7 cm (51 7/8") deep
- 204 cm (80 3/8") high, cover open

Additional Instrument Clearances (Minimum)
- Service clearance in back – 60 cm (23 5/8")
- Operator clearance in front – 1 m (39 3/8")
- Doorway opening for installation – 88 cm (34 5/8") after removal of front cover, door and frame parts
- Usable power cord – 3.1 m (10’) to wall

Running power, water, waste or other utility lines beneath the instrument are not recommended.

No leveling required. Front brakes lock in place. The instrument must be in a vibration-free location.

360° access is needed for service. Installation and service require at least 60 cm (23 5/8") of working space on every side and the back (see diagram).

The Uninterrupted Power Supply (UPS) detailed below must be installed and in the same room as the instrument.

The UPS (6kVA) overall measurement and rear clearance for connection is 257.4 mm (10.14") wide x 1001.7 mm (39.44") high x 730 mm (28.74") deep and weighs 189 kg (416.67 lbs.). Shipping weight is 217 kg (478.41 lbs.). Minimum clearance 102 mm (4") on all four sides for proper ventilation is required.
Room Environment

Operating Temperature
Room temperature must be 18 – 25°C (64.4 – 77°F) with a maximum fluctuation of 2.8°C (5°F) per hour. The system requires a minimum of 90 minutes to warm up from a cold start to the incubation temperature.

Relative Humidity
Maintain between 20% and 80%

Heating Venting Backpressure
-0.05 to 0.05 in. H2O (-12 to 12 Pa) at 30°C
-0.10 to 0.1 in. H2O (-25 to 25 Pa) at moderate temperatures
Duct Diameter: 20 cm (8")

Purified Water Consumption
10.8 L/hr

Waste Requirements
Liquid Waste Output at Maximum Throughput
- Millipore fresh water: 120 L/hr (32 G/hr)
- Biowaste: 20 L/hr (5.25 G/hr)
- Chemwaste: 20 L/hr (5.25 G/hr)
- Total: 160 L/hr (42.50) G/hr

Two 15.24 m (50') tubes are supplied for external waste disposal (one each for Biowaste and Chemwaste). Maintenance of the waste tubing from the instrument to these disposal points is the responsibility of the user. The disposal point should be selected in accordance with local hazardous waste guidelines. The waste tube cannot extend more than 3 m (9.8') above the floor and cannot exceed a total length of 15.24 m (50'). Biowaste, Chemwaste, and the Water Purification Module (WPM) reject water tubing must run independently from each other to the disposal point.

Electrical Installation Requirements

Operating Range
200 – 240 VAC ± 10%, 50/60 Hz

Recommend Service Outlet
- 200 – 240 VAC, 50/60 Hz, Single Phase, 50 A 2-pole, 3-wire grounding (North America)
- 230 – 240 VAC, 50 Hz, Single Phase, 32 A 2-pole, 3-wire grounding (EU)
- 200 VAC, 50/60 Hz, Single Phase, 30 A 2-pole, 3-wire grounding (Japan)

Transient Overvoltage
Installation Category II (branch circuit)

Circuit
The instrument should have a separate, dedicated line L1, L2, and Dedicated Ground in its own conduit. The conduit should start at the distribution panel and be continuous to the receptacle. Three-wire distribution to the receptacle is required for each instrument. The third (green or green/yellow) ground wire should start at the distribution panel and be continuous to the receptacle in accordance with NEC paragraph 250.146 (D), exception 4, unless local codes prohibit. The ground wire should not be tied to grounds from other loads.

Wire Size
6 AWG wire is required to minimize the voltage drop between the distribution panel and the receptacle when each instrument operates at full current load.
Receptacle
Customers must provide a receptacle installed by a qualified electrician before arrival of the instrument. The receptacle must be accessible to the 3.1 m (10') power cord furnished with the instrument.

The USA requires Twist Lock, 50 Ampere, 250 Volts Receptacle, Hubbell/Bryant Receptacle # CS8269A or equivalent.

Electromagnetic Radiation
Do not locate the instrument within 15 m (49 1/4 ft) in any direction of an electromagnetic radiation source such as diathermy apparatus.

Emission Compliance
The Dimension Vista® 500 System has been designed and tested to CISPR 11 Class A. In a domestic environment it may cause radio interference, in which case you may need to take measures to mitigate the interference.

Handheld Barcode Scanner
The handheld barcode scanner uses Class I LEDs (light-emitting diodes) which are classified as non-dangerous to the eyes or skin.

Aliquot Plate Barcode Reader
The aliquot plate barcode reader, located toward the back of the instrument to the left of the aliquot lane one is a Class II laser. This is a possible eye hazard.

Installation
A qualified Siemens representative will install the Dimension Vista® 500 System. The installation will include checkout of all aspects necessary to ensure the equipment is fully operational.

Code Compliance
The Dimension Vista® 500 System has been designed and tested to comply with safety standards UL6101-1, CAN/CSA C22.2#61010.1, CAN/CSA C22.2#61010-2-081, CAN/CSA C22.2#61010-2-101, EN61010-1, EN61010-2-081 and EN61010-2-101 under the following environmental conditions [subclause 1.4].

Temperature 5°C (41°F) to 40°C (104°F)
Humidity Maximum 80% at 25°C (77°F) to 50% at 40°C (104°F)
Altitude Maximum 2000 m (6,561 ft)
Main Supply 230±10% VAC, (allows 200-220-240 VAC input, 50/60 Hz)
Overvoltage Category II
Pollution Degree Degree 2, normal indoor laboratory environment. Air contains only non-conducive pollutants with occasional condensation.
