

Siemens Medical Solutions USA, Inc. is committed to the future environment through its recycling and disposal programs, which include:

- **Re-use**

of used systems, components and replacement parts

- **Further use**

of components and subassemblies for non-medical products

- **Recovering**

of raw materials (and returning them to the materials cycle) takes precedence over thermal recycling, with minimized or no landfill disposal.

Disassembly instructions for disposal and recycling are available upon request for our products.

We will make arrangements with customers at the time of sale to arrange for take-back of used equipment. When we cannot sell refurbished systems, we use treatment facilities that arrange for recycle for material and energy value to prevent landfilling and adverse environmental impacts.

Please contact your Siemens sales representative to discuss how you can take advantage of our used equipment take-back program!
