Virtual Pullback

1. Calculate individual pressures of the sites of interest for the pullback. Ex. LV and AO

2. Click on the Pullback icon and select Virtual Pullback.

3. All of the pressure samples will be displayed on the Virtual Pullback dialog window. Select a Source and Destination site in the list.

4. To change the Source and Destination sites, click on the pressure sample that was selected on the list, to deselect it. Select the site you want to use.

5. Both pressure samples will be displayed on the split screen. Select OK to calculate the pullback.

6. Both pressure samples will be displayed on the Pressure Calculations Event Properties dialog window, along with the Peak - Peak Difference, Gradient and Area.
