Aristos: Ortho Setup

1. Select the correct Organ program long leg or spine.

2. Set SID to 300cm; also make sure to be in transverse detent.

3. Use the 300cm grid in the wall bucky.

4. Position the patient against the bucky; remember to use the step for the long leg exams.

5. Rotor to align the tube and detector, and then hold the rotor switch until the exposure is complete.

6. Use the shift or control keys to highlight the images. Then go to transfer, send to and select SMMWP.
