Aristos: Standby Mode

1. Select OPTIONS>END SESSION from the drop-down menu.

2. Wait for the imaging system to power down. The screen will go dark, and the LED on the monitor will turn from blue to yellow.

3. Go to the generator cabinet in the room and press the OFF button one time.

4. The LED for standby will turn yellow.

5. The system is now in standby mode. All units except the solid-state detector(s) are disconnected from power.

6. The system may be returned to ON after 10 minutes by going to the generator cabinet and pressing the ON button once. The LED will turn green.

7. The imaging system will auto-boot and is ready when you see this message in the status line.
