1. To modify study data, select the patient to be modified on the Pre-Registered Patient List or the Examined Patient List.

2. Click on the Modify Study Data icon.

3. Correct the personal data on the patient. This can be done for patients that were registered manually. *For patient studies that are imported by a HIS/RIS, this data can only be edited if those data fields are unprotected. This configuration change can only be done by a Siemens Service Engineer.

4. If you change at least one of the first five items of data, these entries will be changed in all of the existing studies for this patient. These data fields are Name (last and first), Date of Birth, Patient ID and Sex.
