1. Highlight a preregistered patient under the Preregistered Patients tab.

2. Select the Examination tab on the right, then select the Settings tab.

3. Open the generator console and select a blank box in the appropriate workstation, i.e., Wall Bucky, Table Bucky, Table Top, or Luminos TF DFR.

4. Select Edit name, type in the OGP name, and select Store.

5. Select the acquisition icon; make sure the program name is the OGP you just created.

6. Populate all parameters and select Store.
