Luminos TF/mFD:
Detector Self-Test

1. A detector self-test should be performed about once a month, or when a malfunction occurs.

2. No exposures are required for a self-test; the detector can remain in the bucky tray or on the tabletop.

3. From the main Patient tab, click on the Settings subtask card.

4. Click on the User Settings icon. Click on Flat Detector Info.

5. Select Self-Test.

6. A box will appear to show the progress of the Self-Test. It should take no more than 2 minutes.

7. When the self-test is finished, click on the OK icon.
