Luminos TF: Tomography Setup

1. Select the patient from the Preregistered Patients list or manually enter the patient.

2. Select Table Bucky from the generator. Place cassette or mFD into bucky tray.

3. Lock the tube to transverse and longitudinal detents. The LEDs will light up when the tube is in the correct detent.

4. Adjust the vertical height to 115cm SID setting.

5. Select the correct tomography arc and fulcrum height.

6. The tomography OGP is now available on the generator.

7. You are now ready to make the exposure. The tube will move longitudinally and in the defined angle. Remember to change fulcrum height between exposures.

8. Press this icon to deselect tomography when finished.
