Ysio: Correcting Cropping Error

1. An incorrectly cropped image will appear like this.

![Incorrectly cropped image]

2. Select Postprocessing Mode > Rad Subtask Card.

   ![Postprocessing]

3. Select Cropping Tool.

   ![Cropping tool interface]
4. Open current cropped field to include areas of interest. 
Left click and drag new box OR move an existing cropping line.

5. Select Check Mark to Apply.

6. Correctly cropped image is now displayed.

7. Note: Most incorrectly cropped images occur during tabletop exams where the collimated field is outside the border of the active area of the detector.
