1. Go to the patient demographic page via the new patient key.

2. Click on the drop down menu next to workflow.
3. Select the eSieScan protocol you would like to use.

4. If not selected from the demographic page, click on the carrot in the upper left corner when live imaging:
   - Select protocol from the drop down menu
5. Once you select a protocol and begin imaging, the protocol will load on the right side of the screen.

6. To start the protocol, click on resume protocol. You may pause and resume the protocol as much as you would like during the exam.

7. A green triangle will appear next to the step name when you begin. After you complete a step, there will be a check mark next to it and the green arrow will move to the next step.
8. To redo a step, press the step name with the white arrow cursor. The picture you originally acquired will be saved along with the new one.

![Image of redo step process]

9. To skip a step, click on the next desired step. The green arrow will move forward and the skipped steps will not have a check mark.

![Image of skipped step process]

10. To skip a measurement within a step, press the delete set soft key option. A red X will appear next to the skipped measurement.
11. Press Review Key to review images. To delete an image Press the next key (right click) on image; Select delete option

![Review Key](image1.jpg)

12. The protocol will automatically pause when the following occurs:
   - You go into review mode
   - You initiate a mode or measurement not in the protocol
   The heading will read resume protocol.

![Protocol Pause Screen](image2.jpg)

13. Once the protocol is finished, you may continue scanning or press end protocol.

![Protocol Completion Screen](image3.jpg)

14. Once you have ended, you will not be able to restart the protocol but you will be able to continue capturing more images.
