Changing Date Format from day/month/year to month/day/year When Registering a Patient

From the main menu call up Options>Configuration.

The Configuration Panel opens, double-click on Regional and Language Options.

On the Regional options tab, click on Customize.

Customize Regional Options opens and select tab Date (fourth tab over).

From the drop down menu of the Date tab, select desired short date format, confirm with OK (two times). The window closes, the new date format is applied immediately.

The next time registering a patient, the date changed from day/month/year to month/day/year.
